

Software Development Proposal

Deloitte.

1. Overview

This proposal outlines the development of a private, intranet-accessible dashboard for Daikibo, designed to provide real-time health status of the machines across all four of the client's factories. The system will monitor nine machines per factory, using telemetry data already collected by the client's infrastructure. Access to the dashboard will be restricted to internal users, leveraging the existing company-wide authentication server to ensure secure and seamless login.

The dashboard will provide a single-page interface where users can view the status of all monitored machines at a glance. The interface will allow expanding and collapsing views at both the factory and individual machine levels, providing historical status data for in-depth monitoring and analysis.

2. Scope

Core Functionality

- **Authentication:**

Integration with Daikibo's internal authentication server, allowing users to log in using company-wide credentials.

- **Machine Status Monitoring:**

Display real-time operational status of 9 machines in each of the 4 factories.

- **Collapsible Interface:**

Factory-level view: Collapsible sections to expand or hide factory-specific data.

Machine-level view: Expandable sections showing the current status and historical logs of each machine.

- **Data Visualization:**

Status indicators for each machine (e.g., healthy, maintenance required).

Time-series history of status updates for easy trend tracking.

- **Access Restrictions**

The dashboard will be hosted on the internal intranet only, ensuring security and fast access without external exposure.

3. Estimate

Task	Estimated Man-Hours
Requirements Analysis & System Design	20 hrs
Frontend Development (UI, Collapsible Views, Visualizations)	50 hrs
Backend Development (API Integration, Authentication, Data Processing)	45 hrs
Testing (Unit Tests, Integration Tests, User Acceptance)	20 hrs
Deployment & Intranet Integration	15 hrs
Documentation	10 hrs
Total Estimate: 160 Man-Hours	

4. Timeline

1. **1st September 2024 – 5th September 2024 (20 hrs):** Requirements Analysis & System Design
2. **6th September 2024 – 19th September 2024 (50 hrs):** Frontend Development – UI, collapsible views, visualizations
3. **20th September 2024 – 30th September 2024 (45 hrs):** Backend Development – API integration, authentication, data processing
4. **1st October 2024 – 7th October 2024 (20 hrs):** Testing – unit tests, integration tests, user acceptance tests
5. **8th October 2024 – 12th October 2024 (15 hrs):** Deployment & Intranet Integration
6. **13th October 2024 – 14th October 2024 (10 hrs):** Documentation

5. Support

Daikibo can rely on continuous support post-deployment, including:

- **Bug Fixes:** Prompt resolution of any defects or issues identified in the dashboard.
- **Support Tickets:** A system to log and track support requests, ensuring timely responses.
- **New Functionality:** Implementation of additional features or improvements as requested, aligned with future business requirements.
- **Maintenance:** Regular checks to ensure the dashboard remains functional and compatible with ongoing internal infrastructure updates.
